How can I have my SharePoint site restored on your server?

*Authored by: **ASPHostServer Administrator** [asphostserver@gmail.com]*

If you have developed your Sharepoint locally and you need to restore the Sharepoint on our server with your local Sharepoint file, you need to send us the Sharepoint backup (in .DAT file) and we will restore it for you. Please note that we cannot guarantee that restoration will work as the Sharepoint version installed on the server may be different with the one installed on your local system, plus other external errors.

If you have further problems, you need to create a ticket via our Help Desk System.
