

Do you support ASP.NET MVC 6?

Authored by: **ASPHostServer Administrator** [asphostserver@gmail.com]

Saved From: <http://faq.asphosthelpdesk.com/article.php?id=312>

Up until this article is written, the ASP.NET MVC 6 is not fully released by Microsoft yet. However, we have supported ASP.NET MVC 6 version on just some of our servers. Customers who wish to use this .NET MVC framework is required to make a backup of everything on the current system and a migration is needed to be done to a new server that supports ASP.NET MVC 6. A one-time \$15.00 migration fee applies here.

Since ASP.NET MVC 6 is not fully released by Microsoft yet, we highly recommend our customers not to use this .NET MVC 6 framework yet. Yes, it has run on our server, but it may have some stability issues (that we have not identified it yet)

To deploy ASP.NET MVC 6 project to our server, customers must use the VS 2015 tool and please refer to <http://faq.asphosthelpdesk.com/article.php?id=299> for more information. Please be advised that additional steps are required and customers have to contact our Support Team for additional intervention by our Support Team
