## My WebMail does not work. What should I do?

Authored by: ASPHostServer Administrator [asphostserver@gmail.com]

Saved From: http://fag.asphosthelpdesk.com/article.php?id=34

If your webmail does not work, please kindly check the error message properly. If you see an error message: "Incorrect username and password", this means that you may have entered incorrect credentials. You have to reset your email account credentials via our Control Panel -> Mail -> Mail Settings

Your WebMail address is usually in the form of http://mail.yourDomain.com OR http://[our\_mailserver\_IP\_address]

If you are unsure about the details, please raise a ticket via our Help Desk System to our Support Team
