If you like to use GMail MX service, you need to make sure you point your MX records to the Google MX records. Please refer to the following guidelines:

1. Please login to your Control Panel -> Domain -> DNS Setting
2. Please make sure you add the following MX:

| Priority | Mail Server |
|----------|-------------------------|
| 1 | ASPMX.L.GOOGLE.COM |
| 5 | ALT1.ASPMX.L.GOOGLE.COM |
| 5 | ALT2.ASPMX.L.GOOGLE.COM |
| 10 | ASPMX2.GOOGLEMAIL.COM |
| 10 | ASPMX3.GOOGLEMAIL.COM |

Note: The values in the Priority column show the *relative* priorities of the Google servers. The values do not need to be exactly those shown in the table; different domain providers have different systems for setting MX record priority. Regardless of the system, **ASPMX.L.GOOGLE.COM must be the top priority record**

3. Since you are using GMail MX records, please delete the default MX records created by the Control Panel.
