

Sample Code to Send email using ASP.NET 2

Authored by: **ASPHostServer Administrator** [asphostserver@gmail.com]

Saved From: <http://faq.asphosthelpdesk.com/article.php?id=82>

The following code is developed in C#:

```
//import the Mail Interface  
using System.Net.Mail;
```

```
protected void sendMail()  
{  
    //create the mail message  
    MailMessage mail = new MailMessage();  
    //set the addresses  
    mail.From = new MailAddress(txtEmail.Text.Trim());  
    mail.To.Add("recipient@recipientAddress.com");  
    //set the content  
    mail.Subject = txtSubject.Text.ToString();  
    mail.Body = txtQuestion.Text.ToString();  
    //send the message  
    SmtplibClient smtp = new SmtplibClient("localhost");  
    smtp.Credentials = new NetworkCredential("yourAccount@yourDomain.com", "your_password");  
    smtp.Send(mail);  
}
```

Please note that you need to use localhost as the SMTP detail as there is no remote connection made between your site and our mail server.
