Can I change my Sharepoint portal from root to other location, such as subdomain?

Due to the complexity of Sharepoint configuration, the "migrationâ€• of Sharepoint installation path from one location to the other location is strongly not recommended as it will cause instability to your portal. We are unable to migrate the Sharepoint installation location without a complete SharePoint reload. Should you decide to migrate SharePoint instllation location on your own, you should be aware of the risk and we are not responsible for any damage to your portal.

If you have further problems, you need to create a ticket via our Help Desk System.
